

A WIG BOUTIQUE

6707 Plantation Road Pensacola, FL 32504

(850)476-1916

Easy Steps in taking care of your new hair accessory!

1. When you store your wig it is best to put it on a wig head. This will help your wig keep its shape!
2. If you wear your wig every day, you only need to wash it every 2 to 4 weeks.
3. How do I wash my wig?!?! It's very easy. Fill your sink or basin with **COOL** water. **DO NOT** use **HOT** water; it will singe your hair accessory. Add a teaspoon or dime size amount of wig shampoo to the water, and swish it around. Submerge and swish your hair accessory for about 4 minutes. Drain the water from your sink or basin, and rinse with **COOL** water, gently blot excess water out with a towel, and shake. Spray with a wig conditioner and lightly shake. Next, put your hair accessory on your open wig stand. We greatly encourage that you use your open wig stand, and not a styrofoam head. It will dry overnight. Once it has dried, you may then comb or pick it out. We also suggest lightly spraying your piece with a spray on wig conditioner or Revitalizing Mist once it is dry. It works as a conditioner, and helps keep your hair accessory in great shape!
4. Can I use hairspray? Yes you can. However you can only use "Wig Hairspray". It must read SD 40 Alcohol or less. Anything higher will dry out your wig or hairpiece.
5. What if I have a curly wig or hairpiece? The key to keeping your curly wig looking great is to place a hair net on it while it is drying. Ask us and we will show you how.
6. **EXTREMELY IMPORTANT!!** You must avoid heat. No Ovens, No hot rollers, curling irons, or straightening irons. Beware that steam from the dishwasher, dryer and even the microwave will damage your piece. It is synthetic, so no heat!!
7. We are here for you. So please let us no if you have any questions.
